

Treatment with INDIBA® is **effective**, **comfortable** and **safe** for animals. It works at a fixed electromagnetic radio frequency of 448 kHz, the optimum frequency based on published research. It's applied to your animal via an active electrode in a closed circuit with a fixed 'return' electrode. The power of the device can be changed by your therapist to alter the strength of effect dependent on what is being treated.

Please speak to your therapist to find out how INDIBA® can benefit your horse.

Animal Health

INDIBA®
revitalizing lives

INDIBA® is the market leader in radiofrequency devices worldwide, with over 35 years of research and experience in this technology.

INDIBA Animal Health was born out of the success of our Activ device for human physiotherapy, the trusted device to support rehabilitation, recovery, performance, pain management, injury prevention and wellbeing in elite athletes and professional teams.

INDIBA® Animal Health activates the body's natural mechanisms to regenerate and repair, through cellular bio-stimulation¹, improvement of blood flow² and reduces pain³. In addition, because it works in a closed electrical circuit, it can be used to treat areas much deeper than other therapy options can reach.

INDIBA animal health can help in the wellbeing of all our equine partners from elite athletes to Teddy the beloved companion Shetland.

Benefits of INDIBA:

- Accelerate recovery of acute and chronic musculoskeletal injuries (tendinitis, bursitis, desmitis, muscle tears, etc)
- Treatment of injuries in deep areas that other therapies can't access (sacroiliac joint, deep gluteus muscles etc)
- Osteoarthritis management
- Pain reduction
- Increased stride length⁴
- Can be used in conjunction with PRP and Stem cell injections
- Post-surgical recovery (including presence of metal implants)
- Wound healing
- Improve tissue flexibility (muscles, ligaments, tendons)
- Heat therapy (superficial and deep local hyperthermia)
- Lymphatic Drainage
- Improve muscular stability and recovery of mobility
- Supports facilitation of manual therapy and rehabilitation exercises
